	Deteriorated piston spring	
	Gear problem caused by excessive dry firing	
	Faulty BB Bullets	
Loud operation noise	Damaged dear	Please contact your service technician or ask us for assistance
	Problem caused by engagement between the motor and gears	Don't tune the engagement between the motor and bevel gear yourself, contact your service technician or ask us for assistance
Gun has been immersed by water	Stop Operation immediately and disconnect the battery. Wipe off any excess water from inside the body and from the battery. When AEG is completely dry, test fire. If no operation or signs of malfunction is suspected, please contact your service technician or ask us for assistance	

6 Sight Adjustment

Press the adjust button and slide it forward or backward. The larger the number, the longer the distance to the target

Front Sight: Adjust the sight clockwise for higher sight point or anti-clockwise for lower sight point

7 Firing Operation

Safe

Full Auto

Semi Auto

To Fire the pellet

- 1) Switch the selector switch to Semi or Full Auto
- 2) Pull the trigger

! Caution

- Confirm your firing area is safe before firing.
- There are possibilities that no BB comes out after pulling the trigger. This may happen when new magazine is inserted. Switch to Full Auto and fire 5 – 10 shots will solve this problem.
- Charge the battery if the firing cycle become slow.
- Give the airgun a rest of 5 – 10 minutes after firing 220 rounds in order to ensure long service lives of the motor and battery.
- If bullets are clogged, stop firing and remove the clogged bullets immediately.
- Service the airgun with silicon oil as daily maintenance.
- Hop up may be unstable for first 200-300 rounds after silicon oil is used, this is normal operation of the gun.

X Too Much Hop Up (Return lever towards NORMAL)

✓ Best Position

X Not Enough Hop Up
(Move lever towards HOP)

Variable Hop Up System

By producing backspin on the BB bullets, this system allows BB to fly straighter and longer

Caution

- The best position is where the bullets fly horizontally and the longest flying distance is obtained.
- Turning excessively adversely affects the trajectory. Therefore stop turning the dial when bullets fly horizontally.
- Moving the lever too much towards HOP will cause bullets to clog. Firing the gun with clogged bullets will damage the piston and gear.
- If the hop up is adjusted excessively and causing clogging of bullets, stop operating the gun immediately. Return the lever to NORMAL and remove the clogged bullet.
- APS Airgun Ltd will not be held responsible for any damages or accidents causing by wrongful operation, disassembly and modification of the airgun.

1. Push the upper hand guard fixer upwards
2. Push the upper hand guard towards the muzzle and take the whole upper hand guard up by pulling it upwards
3. Take away the Dummy Cleaning Rod (Optional)
4. Press down the button of lower hand guard ring.
5. Push the lower hand guard rings towards the muzzle
6. Push down the lower hand guard and take it off from the guns

Insert the cleaning rod

Cleaning Rod facing down

1. Make sure to insert the cleaning rod AFTER returning the hop up lever to NORMAL position. (HOP OFF)
2. Insert the cleaning rod from the lead edge of the barrel
3. Be careful so that the angled part of the cleaning rod facing down and remove clogged bullets

Wrap the rod

Maintenance is needed when bullet speed becomes slow. Wrap a cotton cloth on the rod. Hold the leading end of the rod and insert rod into the barrel while turning the rod to clean the barrel inside
