## GAS BLOWBACK

KWA Gas Blowback products are designed to emulate a real AR and pistol platforms in weight, feel, and function. KWA GBBs are the most realistic, efficient, and reliable Gas Blowback products on the market. Each model, like its firearm counterpart, is Mil-Spec in dimension, allowing customization and compatibility with individual gear and accessories.

LM4-RIS  
CAL 6.00 MM  
SER.R140907103

Realistic fire controls, recoil action, and safety features are recreated for a more dynamic training experience without the risk or cost associated with live fire training. The limitation of 180° shooting can be opened up to a full 360° non-lethal training application. KWA GBBs are independent of duty firearms, minimizing legal and safety constraints typically associated with converting firearms for training.

The KWA GBB Series of rifles and pistols utilize the Force Velocity [FV] Gas System and are ATF approved for sale in the United States. The FV's internal cylinder return spring improves operational reliability while maintaining a consistent cycle rate. The reinforced piston is constructed from an advanced composite material that delivers superior gas efficiency and performance in a wide range of climates.

# AEG<sup>2</sup>

AUTOMATIC ELECTRIC GUN

The KWA Automatic Electric Gun [AEG] is one of the longest produced, full-size products that KWA manufactures. Our line of AEGs have been given careful consideration to give the familiarity of a real AR platform so that an individual could seamlessly transition to a KWA AEG. The external build quality and ergonomics have been given great attention to detail. Every rifle in our AEG line features a full metal alloy upper and lower receiver, as well as matching components that would be metal on any AR platform. The stock and pistol grip are comprised of a high impact polymer to reduce weight and ensure strength where it is needed.

The internal design of the KWA AEG features the reinforced 2GX Gearbox. From the balanced gear set, to the compression assembly, each part inside the 2GX Gearbox has been meticulously designed to work in perfect harmony. Innovative design and engineering have given the KWA AEG series a reputation for efficiency and reliability. The 2GX Gearbox was engineered with structural reinforcements to further improve durability. These enhancements improved areas prone to cold temperature failures typically found in an average box. Each 2GX shell is manufactured with high grade alloy steel, tempered with a metal hardening process. Radial cuts near the cylinder head absorb the strenuous impact of high speed pistons preventing premature metal fatigue and shell fractures. Precision machined and hardened tool steel gears combined with six 9mm high speed bearing bushings ensure minimum friction and perfect rotation.

# AEG<sup>2.5</sup>

FEATURING VPS

The latest addition to the AEG family of products is the new AEG 2.5. Set to be available Spring 2017, the AEG 2.5 boasts KWA's new Variable Performance System (VPS) which takes the standard AEG to a new level of efficiency. Highlighted by a Switch Life Extender to minimize the wear and tear on trigger contacts, the AEG 2.5 provides Milsim & Field players the ultimate AEG rifle to outlast the competition. Additional new features include magazine cutoff compatibility combined with adjustable FPS for users to customize their KWA AEG rifle to their own specifications.

# AEG<sup>3</sup>

VPS + UPGRADED INTERNALS

For Milsim players and law enforcement professionals seeking the realism of the KWA Gas Blowback system and efficiency of the AEG 2.5, KWA introduces the new AEG 3. Similar to the AEG 2.5, the AEG 3 builds on the legacy of KWA's reinforced gearbox and reliable performance while fulfilling the KWA promise of engineering to outperform on the field or in training. The AEG 3 system includes all the newest additions of the AEG 2.5 plus a new gear setup with improved gear ratio, reinforced axis post on spur gear for increased durability, enhanced delay chip, increased rate of fire and an Enhanced Polymer PTS® Grip for added comfort.

# LAW ENFORCEMENT & MILITARY

UNIVERSO SIMPER  
AIRSOFT

UNIVERSO SIMPER  
AIRSOFT

KWA works with a variety of military, local, state, and federal law enforcement agencies and training centers. By offering products that are not only cost effective, but also reliable in performance and solid in build quality, KWA has advanced the development of airsoft into a non-lethal training alternative for military and law enforcement agencies around the world.

# WHY TRAIN WITH KWA AIRSOFT PRODUCTS

## COST EFFECTIVE | PERFORMANCE BUILT

KWA has advanced the development of airsoft into a non-lethal training alternative for military, law enforcement agencies, and training centers around the world.

### KWA TRAINING BENEFITS:

- Low start up and operating expenses
- Economical per-round cost [750 BBs for every simunition round]
- Realistic firing controls and safety features
- Weight and recoil action mimicked for muscle memory
- 1:1 dimension fits standard duty gear
- Mil-Spec accessory mounts
- Precision engineered for reliability and performance
- Dedicated law enforcement and military support

# ATP-LE

[LAW ENFORCEMENT]

UNIVERSO SNIPER

# PISTOLS

## **ATP SERIES**

### **[ADAPTIVE TRAINING PISTOL]**

The Adaptive Training Pistol, or ATP, was KWA's first originally designed training pistol unique to the airsoft market. It was designed to resemble the fit and feel of familiar duty weapons currently used by law enforcement and military groups. With the increasing cost of ammunition and the risks of live fire training, the KWA ATP Series is one of the most cost effective and valuable training tools available.

The ATP series carry a lower polymer frame and aluminum alloy slide making the pistols light and cost effective. An accessory rail provides the operator with a tactical advantage and three dot sights allow for a rapid target acquisition. With the increasing cost of ammunition and the risks of live fire training, the KWA ATP Series is a formidable addition to any professional or airsoft collection.

- Extended slide release

## 1911 MK SERIES

### [PROFESSIONAL TRAINING PISTOL]

The KWA M1911 MK series was developed from the successful M1911 series, giving the older M1911 a modern update. The M1911 MK PTP allows operators to train with a 1911 style pistol while providing a tactical advantage over the older 1911 design. All MK series feature front and rear serrations that allow easy weapon manipulation and 3-dot combat sights for quick target acquisition.

In addition, the MK II and MK IV variants feature a Picatinny rail for weapon accessories such as lights and lasers. Designed as a training weapon, the M1911 MK series will fit most duty holsters available on the market, making it an excellent choice for Law Enforcement and Military training.

# RIFLES

## KEYMOD RAIL SERIES

### [GBB | AEG RIFLES]

The KeyMod universal interface system is a new innovation in the firearm industry used for weapon ergonomics and mounting tactical accessories. The KeyMod design was developed by VLTOR Weapons Systems and was open to the public domain by Noveske Rifleworks for all manufacturers to use.

KWA recognizes the benefits of this new design which allows for a wide range of accessory flexibility and weight reduction when compared to traditional quad rail systems and are proud to announce the KR KeyMod Weapons Platform. The KR series have been produced in several different lengths to accommodate a variety of needs.

# PROFESSIONAL TRAINING & SIMULATION

When it comes to training, simulation, and the ultimate experience, there's PTS® and then there's everyone else. With RDT&E (Research, Development, Test & Evaluation) teams in both USA and Asia and using the best materials and manufacturing processes, KWA Performance Industries is committed to bringing the highest quality and innovative products onto the market to meet and exceed the exacting standards of the most discriminating end user. PTS® is also a prolific exclusive replica licensor of the latest and greatest products in the tactical weapons market and have an excellent reputation as a trusted licensing partner that works closely with our licensors to extend awareness of their brands into a new market space.

Radian Weapon Systems® is a leading industry innovator of ambidextrous weapon control components for the M4 platform. Radian® is best known for their industry-leading Raptor ambidextrous M4 charging handle, their patented A-DAC (Ambidextrous Dual Action Catch) in their precision billet AX556 lower receiver, and the revolutionary adjustable 45/90 degree modular ambidextrous safety called the Talon. All these radically innovative components are also synthesized into their fully ambi MI-T556 precision carbine that's capable of sub-MOA accuracy performance and combat condition reliability.

Centurion Arms® was founded by Monty LeClair, a recently retired decorated combat veteran with 20 years of active duty special operations service as a Navy SEAL. For the past four years prior to his retirement, Monty was the Chief Petty Officer at the famed Navy SEAL Sniper School. Monty also performed a stint in TRADET (Training Detachment) as an advanced sniper instructor. Initially known for custom gun builds and for offering superior quality precision AR barrels, Centurion Arms® makes a full range of some of the most innovative and sought after AR rails and AR accessories on the market.

Mega Arms® is a part of Mega Machine Shop®, which was established in 1984. For many years their primary clientele were from the aerospace, fabrication and heavy-equipment industries due to their precision machining capabilities and reputation for superior quality. Seeing a void in the firearms industry for guns they knew they were uniquely capable of manufacturing, Mega Arms® has a legacy of design, engineering, and production of precision AR-15 components and distinctive complete rifles that remain unsurpassed in finish and performance quality in the rifle production industry.

## MKM AR15 CQB [ SPRING 2017 ]

GBB | CQB | FLD | MIL

The PTS® Mega Arms® MKM CQB GBBR replicates the unique design of the Mega Arms® MKM AR-15 platform. The Mega Arms® MKM platform mates the rail with the billet receiver in a proprietary manner that makes it as rigid and sturdy as a monolithic (1 piece) upper yet remains extremely lightweight. This CQB model with its ultra-lightweight 9 inch KeyMod compatible rail and 10.5 inch barrel is the perfect airsoft gun for handling in any confined space and close proximity combat environments. The PTS® Mega Arms® MKM CQB standard equipment also includes the proprietary design PTS® Enhanced Polymer Grip, Enhanced Polymer Magazine, and Enhanced Polymer Stock.

- KWA derived proprietary GBB system
- Enhanced polymer PTS® grip
- Aluminum upper & lower receiver
- Mega Arms® skeletonized trigger
- Ultra lightweight 9" KeyMod mount rail
- Fully retractable bolt carrier

## MKM AR15 [ SPRING 2017 ]

GBB | FLD | MIL | COL

The Mega Arms® MKM AR-15 is built on Mega Arms' proprietary MKM platform that interfaces the rail with the billet style receiver upper in a manner that eliminates the need for a barrel nut, prevents loosening and rotation, and gives the entire unit virtually the strength of a monolithic upper. The 16 inch length barrel with the extended MKM rail makes this PTS® MKM variant the most versatile version for portability, maneuverability, and accuracy for virtually any training or tactical application.

- KWA derived proprietary GBB system
- Enhanced polymer PTS® grip
- Mega Arms® skeletonized trigger
- Collapsible front and rear sights
- Aluminum upper & lower receiver
- Fully retractable bolt carrier

## MML MATEN .308 [SPRING 2017]

GBB | FLD | DMR | MIL

The PTS® Mega Arms® MML MATEN .308 is the first .308 variant of an airsoft gas blowback rifle. The new Mega M-LOK .308 (MML-MATEN) two piece upper receiver & hand-guard with a billet ambi lower. With its lightweight design, it features a billet-style two-piece receiver that interfaces with the rail in a manner that eliminates the need for a barrel nut -- giving the entire unit virtually the strength of a monolithic upper that is compatible with all standard M-LOK and Picatinny accessories.

- Mega Arms® skeletonized trigger
- M-LOK rail system & MIL-STD-1913 Picatinny rail
- Enhanced polymer PTS® grip
- Enhanced polymer PTS® adjustable stock
- Collapsible front and rear sights
- Fully retractable bolt carrier
- .308 style magazine

# MASADA [ SPRING 2017 ]

GBB | FLD | MIL | COL

The PTS® Masada is an airsoft GBBR (Gas Blowback Rifle) and is the most authentic replica of the Masada on the market, completely reproduced in all details. It can be rapidly reconfigured for length, magazine compatibility, stock type, and fire-control set up. It features all the details and modularity of the actual Masada including fully ambidextrous fire controls and tool-less rapid disassembly body components. The rifle can be rapidly reconfigured for length and stock type with basic or no tools. The Masada carbine configuration has been especially setup for mobility and versatility in any situation and features a 14.5" length barrel and folding stock.

- KWA derived proprietary GBB system
- Tool-less quick-change barrel system
- Integrated M-LOK/Picatinny rail
- Fully ambidextrous controls
- Integrated flip-up front sight
- Integrated 37 slot MIL-STD-1913 Picatinny rail

## C40 [FALL 2017]

AEG3 | CQB | FLD | MIL

The PTS® Centurion Arms® C40 closely replicates the size and features of a MK18 rifle. The Centurion Arms® C4 rail is extremely easy to remove and install thus making service and modification of the rifle exceedingly easy. Precision machined and engineered, the PTS® Centurion Arms® C40 AEG3 is a perfect training rifle for the shooter who desires realistic firearms manipulation, the reliability of PTS® training products and the unique functional practicality that only Centurion Arms® can envision.

- Monolithic free float picatinny rail system
- Integrated QD mount points on rail
- Enhanced polymer PTS® stock
- Mechanical/electrical cutoff
- Kinetic Feedback System with real felt recoil
- Rotary hop up unit

The Radian® MI-T556 is a truly ambidextrous rifle built around the innovative and handsomely designed AX556 billet receiver with full ambidextrous controls and is known for its precision machining and proven sub-MOA accuracy. The proprietary matched handguard is M-LOK accessory compatible. Precision machined and engineered, the Radian® MI-T556 is a perfect training gun for the shooter who desires realistic firearms manipulation, the reliability of PTS® training products and the unique style that only Radian® can envision.

- Monolithic free float M-LOK rail system
- Fully ambidextrous controls
- Billet-style receiver/PMAG waffle design
- Enhanced polymer PTS® grip
- PTS® Compact Enhanced Polymer Stock
- Fully retractable bolt carrier
- 45°/90° ambi-selector
- Raptor charging handle
- Oversized bolt catch
