## Your Way of Airsoft

Specna Arms is a reliable and well-recognized brand on the airsoft market. Years of experience and thousands of users confirm the high quality of products. Specna Arms offer includes a wide range of replicas divided into our two lines: polymer Core and innovative Edge. Thanks to that, our offer will satisfy beginners as well as experienced airsoft players.

Specna Arms replicas are equipped with Easy Spring Access - ESA, Gate electronics, reinforced gearboxes, including Orion Gearbox, precision barrels, unique Specna Arms magazines, and many other exceptional elements. To prove the high quality and innovation of our products we have acquired the licensing right from the American firearm manufacturer - Rock River Arms<sup>®</sup>.

Rock River Arms<sup>®</sup> is an American manufacturer of firearms, parts and accessories for AR-15 type rifles and other firearms.

It was founded in 1996 by the Larson brothers who had been working at Springfield Armory for ten years before they established a partnership with Les Baer. Today, operating in facilities in Colona, Illinois, the company produces a full line of "AR" style rifles, all built with the same focus on providing high-quality products.

## EDGE

EDGE™ is a completely new, full-metal line of AEG replicas in the Specna Arms family, designed to meet expectations of even the most demanding players.

Manufactured under license of Rock River Arms, well recognized American real steel maker and equipped with GATE technology, reinforced Orion Gearbox, precision barrel, ESA system and more unique solutions.

EDGE™ series takes Specna Arms brand to a higher level of realism and performance.

# GATE X-ASR

## 4<sup>TH</sup> GEN. MOSFET

X-ASR is the world's first 4th generation MOSFET protected against reverse polarity. It saves space, time and money because additional regular fuse is no longer needed. Acting as an electronic guard, X-ASR improves your AEG's safety and durability through conformal coating and self-test with 2 LEDs. Although designed for up to M120 springs, in case of high torque motor and gears you can use stronger spring.

### What makes X-ASR so special?

- No additional fuse required in AEG installation.
- Automatic resettable protection against reverse polarity - protects motor and the MOSFET itself in the event of reverse polarity. Reverse connection will not damage the MOSFET or motor; the AEG will work again once you connect the battery in the right way.
- Smart fuse - protects MOSFET in case of motor jam. It prevents from overheating, overloading and overcurrenting. The MOSFET is protected against short circuit of signal and motor wires. In case of too strong AEG configuration, the smart fuse will turn off the MOSFET in order to prevent overheating.
- Built-in self-test - 2 LEDs allow for quick troubleshooting.
- Conformal coating - Military Specification MIL-V-173C provides resistance to difficult atmospheric conditions

**ESA<sup>TM</sup> SYSTEM**  
Easy Spring Access

**SPECNA<sup>®</sup>  
ARMS**  
EDGE

Just like the other series, Specna Arms® EDGE line is equipped with a quick spring change system. There is no need to take the gearbox out of the replica in order to exchange the spring or adjust the muzzle velocity to the required value. All you have to do is to disassemble the buffer tube by unscrewing just one screw, spin off the pin with the spring guide and exchange the spring.

**The whole operation takes about one minute and requires only a screwdriver.**

# ORION™

## GEARBOX

- 1 Reinforced gearbox shell.
- 2 Main spring release option.
- 3 Piston with the steel tooth rack.
- 4 Aluminum nozzle with an O-ring.
- 5 Aluminum piston head with a ball bearing.
- 6 Aluminum cylinder head.
- 7 8mm ball bearings.
- 8 ESA™ System inside.

Orion gearbox is a result of several years of Specna Arms experience in the field of internal parts. This product stands for reliability, durability and battle-tested solutions from the top shelf. Steel gears and tooth rack along with reinforced gearbox shell provide the higher level of durability for stock spring as well as further, power tuning.

Aluminum and sealed nozzle, cylinder head and piston head assure the stable level of muzzle velocity. Low-resistance wires and pre-installed MOSFET GATE X-ASR help to optimize the battery's efficiency. Orion Gearbox is a guarantee of long, trouble-free performance and core for the upgrade of your replica.

# GATE ASTER

ASTER V2 is a younger brother of well-known TITAN V2. This world's first 4th generation AEG Control System is destined for most of AEGs with gearbox V2 on the market (including stock, low- and mid-tuned) and even for high-tuned guns (in case of EXPERT firmware). It was designed to achieve maximum reliability at attractive price and hence it has extremely profitable price-performance ratio.

## GATE Control Station™ app

ASTER and GATE Control Station give you total control of your AEG. The GCS offers you the option to:

- Control your airsoft gun from smartphone with Android (also with iOS in 2020 after Bluetooth® adapter release) and PC with Windows or macOS)
- Simply adjust the ASTER settings
- Update and upgrade firmware
- See the BB counters and Meter statistics
- Perform diagnostics and send reports

# ESA2

Easy Spring Access

It's hard to imagine an easier and quicker way to change the spring. The ESA2 requires no tools and allows you to change the spring in less than a minute. Just remove the buffer tube, unscrew the spring guide and it's done! ESA2 allows you to quickly adjust the muzzle velocity while being in the field. You can adapt your replica to indoor or field airsoft games in a second.

SNIPER  
RIFLE  
REPLICAS

Specna Arms S-Series is the line that extends the Specna Arms offer with the spring-powered replicas of sniper rifles.

They stand out by their durability and attractive prices.

The great news for Airsoft snipers is that some models are sold with the set of the most useful accessories like a scope or a bipod.
