Your Way of Airsoft

Specna Arms® is a reliable and well-recognized brand on the airsoft market. Years of experience and thousands of users confirm the high quality of products.

Specna Arms offer includes a wide range of replicas idevided into three lines: **Core, EDGE, EDGE 2.0**. Thanks to that, our offer will satisfy beginners as well as experienced airsoft players.

Specna Arms® replicas are equipped with Easy Spring Access - **ESA™**, **Gate** electronics, reinforced gearboxes, including **Orion™ Gearbox**, precision barrels, unique **S-MAGS™**, and many other exceptional elements.

To prove the high quality and innovation of our products we have acquired the licensing right from the American firearm and accessories manufacturers - **Rock River Arms®**, **Daniel Defense®** and **Strike Industries®**.

L i c e n s e d b y :

STRIKE INDUSTRIES

DANIEL
DEFENSE

Rock River Arms® is an American manufacturer of firearms, parts and accessories for AR-15 type rifles and other firearms.

It was founded in 1996 by the Larson brothers who had been working at Springfield Armory for ten years before they established a partnership with Les Baer. Today, operating in facilities in Colona, Illinois, the company produces a full line of "AR" style rifles, all built with the same focus on providing high-quality products.

For more visit :

www.rockriverarms.com

Strike Industries is a company from California that has been creating recognized and innovative accessories for AR and AK system weapons, pistols, and other firearms since 2010.

Aluminum accessories made in CNC technology brought them great popularity. Their main features are precision of craftsmanship, low weight, and remarkable ergonomics. Moreover, the compelling design does not allow you to pass by their products indifferently.

For more visit :

www.strikeindustries.com

Daniel Defense is one of the most famous manufacturers of AR15 carbines in the world.

It is a company settled in Georgia that started with the production of accessories for firearms. They gain great recognition for the MK18 carbine handguard and later for the entire carbine, adopted by the US SOCOM. It is a legendary model known from special forces operations, games, or movies, appreciated for its reliability and versatility. Nevertheless, the Daniel Defense offer is much wider and includes many interesting and innovative models.

SPECNA[®]
ARMS
EDGE

EDGE™ is a full-metal line of AEG replicas in the Specna Arms family, designed to meet expectations of even the most demanding players. Manufactured under license of Rock River Arms, well recognized American real steel maker and equipped with GATE technology, reinforced Orion Gearbox, precision barrel, ESA system and more unique solutions.

EDGE™ series takes Specna Arms brand to a higher level of realism and performance.

*A registered Trademark of Rock River Arms INC.

The new models are based on the proven, full-metal construction known from the EDGE AEG replicas. The new line consists of standard replicas and those licensed by Rock River Arms.

The upgraded version has built-in GATE ASTER™ unit with the innovative, optical sensors and offers a wide variety of functions. EDGE 2.0 is equipped with high-torque motor, the flat hop-up, and the ESA2 system that increase the level of replicas' performance.

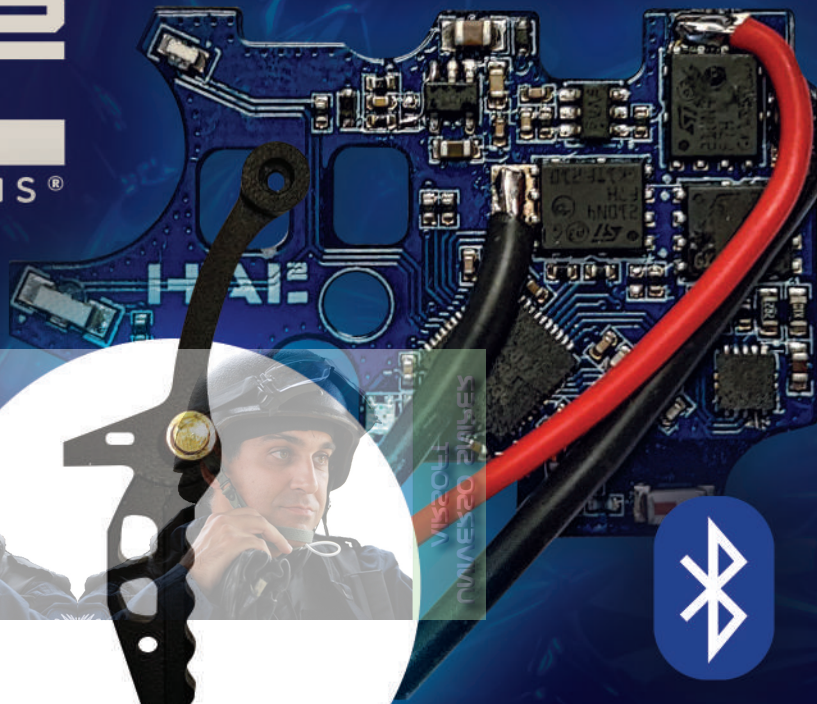

HAL2TM

BY SPECNA ARMS[®]

Step into the 21st century with the HAL2TM electronic control unit by Specna Arms[®]!

The HAL2TM is a high-tech electronic unit that represents the new brain of your replica. Based on the Hall effect, the trigger* provides unprecedented sensitivity, even over 500 points, as well as responsive operation, while being insensitive to dirt or external light. The single-board design ensures quick and trouble-free installation, while the built-in Bluetooth[®] Low Energy module provides an easy and stable connection to your phone for configuration while ensuring long operation on the replica's battery. A number of sensors monitor the replica's flawless operation and will prevent damage to the replica when it detects a problem.

*Dedicated trigger included in the kit is required to operate the system.

**Designed and
manufactured
in Europe.**

COMING SOON . . .

SPECNATM LINK

Configuring your replica has never been easier!

With the new Specna LinkTM app you will discover all the possibilities of the HAL2TM electronic unit. Select SINGLE, BURST, or AUTO firing modes and assign them to the selector position of your choice. Select the burst length, set the rate of fire, and adjust the parameters to suit your requirements. Save settings for different games and use them alternately. Quickly configure all your replicas with the HAL2TM thanks to the function of storing them on your profile. Thanks to the advanced telemetry, you can keep track of the status of your replica and its performance during servicing. These and many other features as well as future functionalities are available for free, to all registered users of the app, without additional paid solutions.

The app is available for iOS and Android devices

GATE X-ASR

4TH GEN. MOSFET

X-ASR is the world's first 4th generation MOSFET protected against reverse polarity. It saves space, time and money because additional regular fuse is no longer needed. Acting as an electronic guard, X-ASR improves your AEG's safety and durability through conformal coating and self-test with 2 LEDs. Although designed for up to M120 springs, in case of high torque motor and gears you can use stronger spring.

What makes X-ASR so special?

- ✓ No additional fuse required in AEG installation.
- ✓ Automatic resettable protection against reverse polarity - protects motor and the MOSFET itself in the event of reverse polarity. Reverse connection will not damage the MOSFET or motor; the AEG will work again once you connect the battery in the right way.
- ✓ Smart fuse - protects MOSFET in case of motor jam. It prevents from overheating, overloading and overcurrenting. The MOSFET is protected against short circuit of signal and motor wires. In case of too strong AEG configuration, the smart fuse will turn off the MOSFET in order to prevent overheating.
- ✓ Built-in self-test - 2 LEDs allow for quick troubleshooting.
- ✓ Conformal coating - Military Specification MIL-V-173C provides resistance to difficult atmospheric conditions

GATE ASTER™

The built-in **ASTER™** unit is equipped with the innovative optical sensors and the smart fuse that protects the battery, motor, and the controller, even in case of reverse battery connection. The module offers even 250 possible trigger sensitivity settings and many more useful functions that will give you the upper hand on the airsoft field.

What makes ASTER so special?

- ✓ Protection against battery reverse polarity
- ✓ Proximity trigger sensor which offers even 250 possible sensitivity settings
- ✓ Option to configure its main settings simply via trigger or completely through GATE Control Station App for Android, Windows and macOS (also for iOS in 2020, after Bluetooth® dongle release)
- ✓ Built-in RGB led makes programming easier

For more visit: www.gatee.eu

GATE Control Station™ App

ASTER and GATE Control Station give you total control of your AEG. The GCS offers you the option to:

- ✓ Control your airsoft gun from smartphone with Android (also with iOS in 2020, after Bluetooth® dongle release) and PC with Windows or macOS
- ✓ Simply adjust the ASTER settings
- ✓ Update and upgrade firmware
- ✓ See the BB counters and Measurements statistics
- ✓ Perform diagnostics and send reports

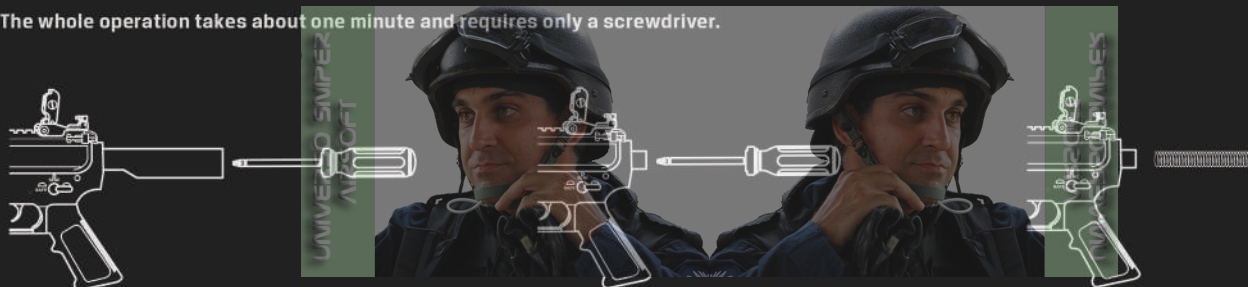

ESA

Easy Spring Access

Just like the other series, Specna Arms® EDGE line is equipped with a quick spring change system. There is no need to take the gearbox out of the replica in order to exchange the spring or adjust the muzzle velocity to the required value. All you have to do is to disassemble the buffer tube by unscrewing just one screw, spin off the pin with the spring guide and exchange the spring.

The whole operation takes about one minute and requires only a screwdriver.

01

Use a screwdriver to remove the screw holding together the stockpipe and the receiver; remove the stockpipe.

02

Use a screwdriver to gently push the spring guide forward. The spring guide is clearly visible after removing the stock pipe. Rotate the spring guide by 45 degrees. Rotate the spring guide by 45 degrees until you feel the spring's tension.

03

Pull the spring guide and spring out of the gearbox.

ESA2

Easy Spring Access

It's hard to imagine an easier and quicker way to change the spring. The ESA2 requires no tools and allows you to change the spring in less than a minute. Just remove the buffer tube, unscrew the spring guide and it's done! ESA2 allows you to quickly adjust the muzzle velocity while being in the field. You can adapt your replica to indoor or field airsoft games in a second.

01

Unscrew the castle nut on the stock tube.

02

Rotate the stock tube and remove it from the lower receiver.

03

Unscrew the pin with spring guide and spring, then remove it from the gearbox.

04

Replace the spring and then mount all parts back again, repeating the process in reverse.

EU Registered design no. 007422159-0001.

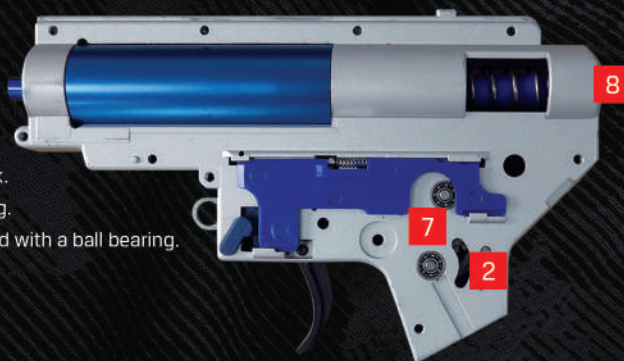

ORION™

GEARBOX

Orion gearbox is a result of several years of Specna Arms experience in the field of internal parts. This product stands for reliability, durability and battle-tested solutions from the top shelf. Steel gears and tooth rack along with reinforced gearbox shell provide the higher level of durability for stock spring as well as further, power tuning.

Aluminum and sealed nozzle, cylinder head and piston head assure the stable level of muzzle velocity. Low-resistance wires and pre-installed MOSFET GATE X-ASR help to optimize the battery's efficiency. Orion Gearbox is a guarantee of long, trouble-free performance and core for the upgrade of your replica.

- 1 Reinforced gearbox shell.
- 2 Main spring release option.
- 3 Piston with the steel tooth rack.
- 4 Aluminum nozzle with an O-ring.
- 5 Reinforced polymer piston head with a ball bearing.
- 6 Aluminum cylinder head.
- 7 8mm ball bearings.
- 8 ESA™ / ESA2™ System inside.

Specna Arms FLEX is a response to the constantly changing needs of airsoft players. It is a line of the lightest replicas, perfect for dynamic CQB games.

SA-F01
Carbine Replica

The main features of the series are light, polymer handguards, which increase the possibilities of quick usage of the replica or lightning-fast aiming. In combination with a rotary HU chamber, a precision barrel, a reinforced gearbox, and the ESA system Specna Arms FLEX are ideal Plug&Play replicas. Models from this line are also very good as bases for further modifications to increase power or rate of fire.

J
SERIES

UNIVERSO SIMPER
WPSOFT

UNIVERSO SIMPER
WPSOFT

The new J-Series™ consists of the long-awaited Specna Arms® replicas based on the legendary assault rifles.

The J-Series™ replicas feature a very solid construction with a full steel receiver and outer barrel. The offer includes both classic models with wooden parts and tactical models with RIS/Picatinny and M-LOK rails. J-Series™ replicas have the reinforced ORION™ V3 Gearbox with the Enter & Convert™ quick spring change system.

ORION™ V.3

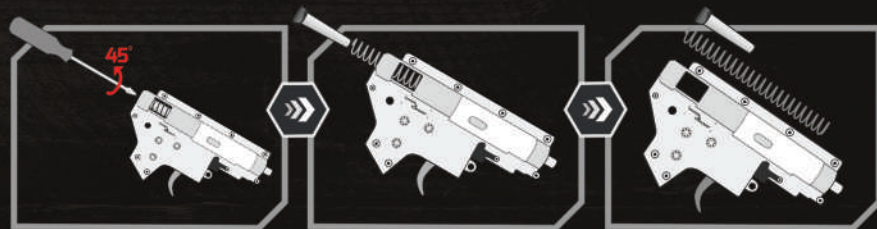

G E A R B O X

- 
- 1 Reinforced gearbox shell.
 - 2 Piston with the steel tooth rack.
 - 3 Aluminum nozzle with an O-ring.
 - 4 Reinforced polymer piston head with a ball bearing.
 - 5 Aluminum cylinder head.
 - 6 8mm ball bearings.
 - 7 Enter & Convert System inside.

ENTER & CONVERT[™] SERIES

The gearbox is equipped with a fast spring change system so-called Enter & Convert[™]. It only takes a single move to release the spring guide. It becomes extremely easy to adjust the replica to operating in certain field type - downgrade for CQB or upgrade for a skirmish in the woods.

This is the only line of replicas in the EDGE family with a polymer body, which brings these replicas closer to their real counterparts. In addition, G-series replicas are equipped with EBB system that takes them to a higher level of realism. However, if necessary, the system can be easily deactivated. Inside the G-series, you can find a reinforced gearbox (micro

switch) that can extend the life of the electrical system. The G-series includes various replicas, from shortened models, ideal for CQB games, to long versions with integrated optics for long distance shooting. In result, everyone will find something for themselves.

ONE

It all started with the ONE. It was the first line of replicas manufactured by Specna Arms. Over the years, it has been improved and modified. Today replicas from the ONE-series are well-recognized and refined products. Durable gearbox, Enter & Convert

and SAEC quick spring change systems, full metal body, a very wide range of models (divided into series) and great workmanship - these are the features from which the ONE series has been known for many years. Experience them yourself.

OVERVIEW

SPECNA[®]
ARMS

SAI BLU PISTOL REPLICA

The SAI BLU Utility Tier One Package pistol is a unique replica created in cooperation between **Specna Arms**, **EMG**, and **Salient Arms International**™ - a well-known firearms manufacturer from the United States.

SPECNA[®]
ARMS

EMG
INTERNATIONAL

SALIENT ARMS INTERNATIONAL

The replica's features include:

- A lightweight frame made of solid polymer plastic with a rough anti-slip texture made along with the specifications of the flammable original
- An aluminum slide with a weight-saving cutout, aggressive texturing, and a MOS-type cutout
- Two sets of sights
- Aluminum manipulators
- Adjustable hop-up system
- Integrated accessory rail in 22mm RIS standard
- Enlarged magwell
- Grooved SAI external barrel with 11mm CW/14mm CCW adapter
- Original manufacturer's markings of Salient Arms International™
- Powerful blow-back system

BEST QUALITY PRECISION BB'S

MADE BY **BLS**

Specna Arms® brand known for its quality and innovativeness of produced replicas introduces: **precision BB's from the professional EDGE™ series**. In the wide array of EDGE™ BB's you will find **highest-quality ammunition** for ASG replicas manufactured by true experts in terms of precision BB's - **Taiwanese BLS**.

The diameter of EDGE™ BB's is **5.95 mm (+/- 0.005 mm)** and the difference in weight among BB's does not exceed **0.01 g**. As a result, Specna Arms® EDGE™ BB's are ideal for standard barrels, while they **reach their full potential in precision barrels**.

At the final stage of production, **high-polish** is carefully applied to every BB made by Specna Arms®. Afterwards, EDGE™ BB's are laced with a **special friction-reducing layer** in order to ensure a problem-free cooperation with precision barrels. This also results in a better cooperation with Hop-Up buckings.

Thanks to a full control over the production process, the manufacturer achieves ideally-spherical BBs without visible cavities or seams. A well-distributed center of gravity combined with a lack of air space inside the BB allow for a very good repeatability of shots.

S-MAG™

Specna Arms presents polymer
S-Mag magazines.

They are characteristic for their
compact, durable construction
and smooth design. Noteworthy
is the characteristic **texture**
comprised of Specna Arms
logos.

The magazine was made
of **durable polymer**. Unique
construction makes this
magazine **compatible with**
a majority of replicas available
on the market and **ideally-suited**
for various tactical pouches.
S-MAG facilitates a **seamless**
feeding of BBs even at high ROF.

SPECNA[®]
ARMS

The latest series of internal parts results from cooperation between Specna Arms and the legendary Japanese brand Prometheus, whose products have been placed on the top shelf for many years. Precisely made Prometheus Specna Arms Edition components will be an excellent choice for AEG replica tuning for every demanding player.

Specna Arms, in cooperation with Maxx Model Products, has prepared a new aluminum Hop-Up chamber. Maxx Model makes tuning parts for the most demanding players. Their products offer the precision of craftsmanship unprecedented on the market. Attention to details guarantees the perfect operation of the HU system in the replica.

- ☒ Precisely made of a block of aviation aluminum using CNC technology
- ☒ Detachable brass Slot Pin for setup and maintenance
- ☒ Equipped with a special CNC Delrin Locking C-Clip, preventing vibration and barrel movement
- ☒ Equipped with 3 compression springs at the top, bottom, and center of the chamber, ensuring a perfect and secure fit in the replica
- ☒ Specially designed "BB Latching System" preventing the BBs from falling out after removing the magazine from the replica

Parts and Accessories

Specna Arms® is a well-known brand on the airsoft market. In order to meet customers' expectations, we introduce high-quality internal parts as separate products. From now on gears, pistons, cylinders, nozzles, gearbox shells, and many more will be available for sale. That will allow you to get the maximum performance from your replica.

The Specna Arms® never lags behind - it constantly develops and improves its products to provide customers with optimal solutions in the airsoft field.

SPECNA ARMS ACCESSORY SYSTEM

Discover the new series of accessories created by our designers for Specna Arms replicas.

The SAAS (Specna Arms Accessory System) project is a result of our vast experience in manufacturing airsoft replicas. It covers various types of accessories like stocks, magazines, or grips. From the first draw till the final product, we design SAAS items with ergonomics and durability in mind. To provide users with the best performance possible, we have selected high-quality materials and used precision manufacturing technology. SAAS accessories are the perfect complementation of your Specna Arms replicas, increasing their level of functionality.

HEAVY OPS STOCK

Heavy Ops Stock gives you the ultimate space for your battery. One of the biggest battery compartment on the market joined with ergonomic design. Additionally, the stock has the QD mount for a tactical sling, which makes it even more universal. Polymer construction guarantees durability in every conditions, even in low temperatures. The stock fits on a military standard AR15/M4 buffer tube.

SPECNA ARMS

ANGULAR FRONT GRIP

Angular Front Grip is made from aluminum to make it lightweight and durable. It can be used both as a tactical grip and hand stop, so it's a universal solution for shooters and airsoft players. Additionally, it has QD mounts for slings, to make your carbine even more ergonomic and versatile. It was created to fit every MLOK-standard rail.

DESIGNED IN EUROPE

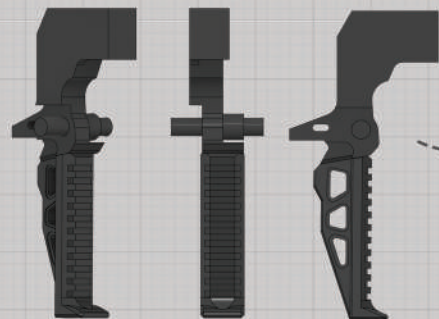

DESIGNED IN EUROPE

SPECNA ARMS

LIGHT OPS STOCK

Light Ops Stock is designed as a lightweight and durable solution for your replica. Lightweight because it has a very simple, but ergonomic design, durable, because it is made from a flexible polymer, which can work in a wide range of temperatures. Stock is even more universal because of the QD mount for tactical sling and fits perfectly on a military standard AR15/M4 buffer tubes.
