

INSPIRATION MANUA

INSTRUCTION MANUAL

PARTS NAMES

Learning the names of the parts of your new soft air pistol will help you to understand your owner's manual. Use this manual to increase your enjoyment of this airsoft pistol (Fig.1)

SAFETY

Push down the Safety Button to "S" Position. Keep the pistol on "SAFE" position until you are actually ready to shoot.

When you are certain that the target, back-stop and surrounding area is safe, position the safety to "F" (Fig.8) Pulling the trigger now will fire the gun.

INSERTING CO2 CARTRIDGE

WARNING!

- CO2 cartridges may explode at temperatures above 120K (48.9J). Do not mutilate or incinerate them. Do not expose them to heat or store CO2 cartridges at temperatures above 120K (48.9J).
- Keep hand and face away from escaping CO2 gas. It can cause frostbite if allowed to come in contact with skin.
- Use only CO2 cartridges which are the 12 gram type.

1. Always point gun in a safe direction. Push down the safety button to "S" position.
2. Pull grip cover from left to end of right side. (See Fig.3)
3. Turn puncture screw counterclockwise until there is enough room to insert a CO2 cartridge. (See Fig.4)
4. Insert the CO2 cartridge into the grip, first placing the larger end of the CO2 cartridge into the lower portion of the grip (See Fig.5)
5. With muzzle pointed in a safe direction, turn puncture screw clockwise to puncture the CO2 cartridge. Continue turning rapidly until finger tight.
6. Push grip cover to original left position.

LOADING BB'S

(0.2g plastic BB's for 6mm version; 4.5mm pellets for 4.5mm version)

1. Make sure the pistol is on SAFE "S" position (Fig.1)
2. Point the pistol in a SAFE direction.
3. Press the clip release button and remove the clip from the bottom of the grip frame. (Fig.6)
4. Pull the BB guide down to the bottom and hold in place. (Fig.7)
5. Insert up to 15 pcs 0.2g BB's into the magazine for 6mm version. Insert up to 20 pcs pellet into the magazine for 4.5mm version.
6. Release the BB guide.

FIRE

Make sure the gun is pointed at a safe target. Once the last BB has been shot from the gun, it is still possible for the trigger to be pulled, but only CO2 will be discharged.

WARNING!

- Not a toy. Adult supervision required. Misuse or careless use may cause serious injury or death. Read and follow all instructions, carefully, before using. This is a high power air gun recommended for use by those 18 years of age or older.
- Never store a loaded gun. At the end of a shooting session. As a safety precaution, always put "on" safety "S" position. Remove CO2 cartridge then take out magazine and remove the rest of BB's. Store in a safe place to prevent unauthorized use.
- If a BB does not fire after completing the operation steps, do not assume that the gun is unloaded. Keep the gun pointed in a safe direction. Never point gun at anyone. Always assume and treat gun as if it were loaded and ready to fire.
- High temperatures can produce pressure in the CO2 cartridge, and gun, that is considerably higher than normal operating pressure. Such increased pressure may prevent the pistol from firing and may result in permanent damage to the gun. The maximum operating or storage temperatures can easily be reached if the gun is left directly in the sun on a bright, sunny day. Therefore, the shooter should not expose the pistol to high temperature conditions, or direct sunlight, for any extended period of time.
- Rapid firing of the gun will cause temperature reduction in the pistol and CO2 gas. This will result in lower BB velocities and may even lower gas pressure enough so that the pistol will not fire. This condition can be avoided by allowing more time between shots. This permits the gas to increase in temperature and pressure and produce normal velocities.
- Care should be exercised to ensure that the gun is not shot with a CO2 cartridge that is low in pressure because a BB may not be expelled from the barrel.
- A CO2 cartridge contains gas under pressure, whether or not it has been inserted into a gun. If exposed to high temperatures (such as inside of a closed car in direct sunlight), it could explode. Be sure to store all cartridges in a cool place.
