

# CAT CAT GUE 2009

# HK SERIES

ARES (name based on the Greek God of War), has released its line of 2009 automatic electric guns (AEG), gas powered guns, grenade launchers, tactical paintball guns, accessories, upgrade parts, and unique gun rack. The new line of guns and accessories caters to the avid airsoft player and collector. With a high standard of quality and performance to back up each gun's realistic features and markings, each ARES AEG gun is built around a durable and reliable reinforced metal gearbox with an out of box performance of 360-380 FPS. The standard motor included in ARES AEG's are high torque 1000 rpm which produce a high rate of fire and all AEG's are Lithium Polymer (LiPo) battery compatible (although batteries are not included). All of ARES gear boxes and firing mechanisms are upgradeable for higher performance and adjustable for optimal accuracy. For its line of highly realistic gas propelled sniper rifles, ARES prides itself on high performance and long range accuracy with guns models held in high regards by military and law enforcement snipers. Each ARES gun replicates the look and feel of real steel with most designs having CNC milled components and rails, metal magazines, steel bodies, and reinforced polymer grips. ARES designed guns are not replicas or clones from other airsoft manufacturers, but rather each gun is designed and tested in-house to meet player's needs while focusing on authenticity.

### Ares Real Action Paintball

Ares RAP series with features that mimic the M4, such as shell ejection after every shot, paintballs force-fed by magazine, and the option of a collapsible or solid stock to disguise the CO2 cylinder, it's the very image of the M4. Ares RAP series shoots .43 caliber paintballs, which are loaded into alloy or biodegradable plastic shells. The latest improvements to the M4 improve the accuracy, range, and overall precision of the marker, not to mention the added realism of real-world functionality.

Ares RAP series represents a complete redesign from the other versions! The new core design offers greater reliability and durability, with rugged features like all-metal construction fabricated with weight, width, length, and ergonomics comparable to authentic M16/M4 style assault rifles...and the pistol grip is identical to that on an M4. This gives operators a true-to-life feel, as if they are training with their duty gear. The hand guards and butt stock are completely interchangeable with those on a real M4 and has a removable carry handle with M4-standard iron sights that are adjustable for elevation and windage. With the carry handle removed, the Ares RAP series can take any standard scope, sight, or mount on its flattop rail. Ares RAP series offers endless configurations, and the weaver-style rail is fully compatible with standard military specification attachments. This versatility allows for a world of configurations: RIS CQB, Special Ops, red dot sights, scopes, flashlights...and even grenade launchers!

A new low and steady pressure design that allows the unit to operate under all weather and temperature conditions - so you can train in rain, hail, snow or in the scorching desert heat. The trigger guard folds back to give room for shooting gloves. This feature is ideal for winter operations.
