

The World of Airsoft Power

ARES (named after the Greek God of War) has released its 2010 line of automatic electric guns (AEG), gas powered guns, spring powered guns, grenade launchers, tactical paintball markers, accessories, internal & external upgrade parts, and unique gun rack system. ARES' line of guns and accessories will satisfy both avid airsoft players and gun collectors.

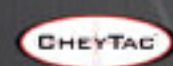

ARES airsoft guns are not merely direct clones of other airsoft manufacturer's designs. Rather, ARES airsoft guns are distinguished by their uncomplicated and useful technical innovations, designed and tested in-house to meet player's needs, while simultaneously focusing on realism. ARES is also constantly working to improve existing models by developing and introducing new features and capabilities.

Combining a high standard of quality and performance with realistic features and markings, ARES AEGs are built around durable and reliable reinforced metal gearboxes with an innovative and convenient spring upgrade system. This allows ARES AEGs to be adjusted above or below their basic out-of-the-box 360-380 FPS far more easily, quickly and affordably than any other AEGs (since only the spring is replaced). The standard motors included in ARES AEGs are high torque, 1000 RPM units, which produces a good rate of fire even with higher spring power. ARES AEGs are compatible with most standard internal upgrade parts for higher performance and accuracy. All ARES AEGs are compatible with Lithium Polymer (LiPo) and Lithium Iron Phosphate (LiFePo) batteries (batteries not included).

With its line of highly realistic gas and spring propelled sniper rifles, ARES prides itself on its selection of high performing and accurate airsoft guns. All ARES sniper rifles are faithfully based upon famous rifle models held in high regards by military and law enforcement snipers. Each ARES rifle carefully reproduces the look and feel of the real steel design through the extensive use of CNC milled components and rails, metal magazines, steel bodies and reinforced polymer grips. ARES sniper rifles supports a variety of power upgrades for more higher pressure gas or spring.

This accurately-made stainless steel product cannot fire any bullet as the middle part of the barrel is completely enclosed. The overall structure of this product cannot withstand the pressure and force from firing any real ammunition; this product is far too small to fit any real ammunition. This product is only used for collecting and display.*
